**Subject:** Comment on microsoft final judgement

To: the judges in charge of United States v. Microsoft Settlement

In my personal opinion  
The proposed final judgment fails to

- 1) Remedy software developers who's jobs have been lost due to the Microsoft monopoly.
- 2) fails a good enforcement.
- 3) Fails to remedy java developers community.

To all the people who are in the field of Computer Science, it's clear that Java is the Leader in tomorrow's programming languages and

The way software will be written. However Microsoft's strategy has been to push it's own senseless Active X and .net technology and suppress the Java technology.

- 4) To completely compensate consumers who have paid allot of money to upgrade their software (because of the bugs in the Microsoft's previous systems).

In my opinion the only judgment that would make sence in this case is to make microsoft to reveal it's code so other companies can make compatible Windows operating system.
